

Epic LED Delivers Two Digital Billboards across the Atlantic Ocean to REMKOL Integrated Services Ltd, in Lagos, Nigeria

Manassas, VA. and Lagos, Nigeria – (October 31, 2010) – Manassas Virginia based Epic LED (www.epicled.com) was contacted by REMKOL Integrated Services Ltd, a company based in Nigeria, West Africa to produce two digital billboards to advertise and actively promote its business in the city of Lagos. Epic LED had been looking to further expand onto the global business landscape and with this contract marks a great stride into opening up a world of opportunities on the African continent. “After seeing their products we were highly impressed with the quality and clarity of their screens” says Remi Kolabo, CEO of REMKOL.

Since the international market varies from the U.S. market two specially customized 16mm and 10mm digital billboards were delivered to the client to satisfy the requirements of that locale. The billboards were customized to function at an optimum level in the sub-Saharan nation because Nigeria’s weather pattern fluctuates between dry, sunny, high humidity and high temperatures, to very wet and rainy periods in a given year. Epic LED created a high-temperature CPU to withstand the heat index and the power supply source was specifically tailored to meet the voltage requirements of the country. A Local Area Network (LAN) was also created for the client to remotely access the system in order to allow for real-time monitoring and remote programming from the shores of the United States.

Epic LED produces digital billboards with an adjustable current source that ensures minimum grayscale loss that result in optimal pictures in any kind of environment day or night. The 16-bit color processing and super high refresh rate (3840Hz to 7680HZ) provide stunning flicker-free broadcast quality video images. The unique horizontal and vertical louver design eliminate the mosaic phenomenon caused by the joints of the shades. Each LED pixel has its own brightness and chroma value and the calibration technology can adjust the brightness and chroma for every LED lamp. Moreover, every panel has an independent intelligence module, which can record the running time, LED brightness and chroma value simultaneously so that after calibration, the entire LED display can sustain even brightness and constant chroma levels throughout the life of the display. Epic LED utilizes the highest quality power supply and signal connectors as well as automatically recognized input and output signals to ensure the best stability and protection levels for its panels. The creative design and mould processing technology allows both panel and casing to be shaped without welding. This process ensures a high precision and consistency of the entire structure while making it visually stunning. A unique pixel sharing technology creates a visual resolution 400% clearer than the physical resolution image, which greatly improves the quality of the video image and enhances the resolution for the entire screen. Epic utilizes IP65 rated panels which are able to withstand the most severe outdoor environment thanks to its unique metal stretching moulds, which allow the cabinet to be firm, dustproof and waterproof.

About Company:

In business since the year 2000, Epic LED started as a customary sign shop that serviced its local community. The company’s goal was to help budding business owners define their

companies' image and to propel them into a promising journey. Today, Epic LED continues to support not only Washington DC area businesses, but has clients across the U.S. and the world.

At Epic LED, we believe in totally committing to our customers and their business vision. We understand the importance of our clients' advertising needs and we go the extra mile to ensure that those objectives are met.

Epic LED is built on the foundation of a dedication to excellence which means always exceeding customers' expectations, delivering quality products, and providing up-to-date service solutions. We therefore pledge to our clients our total dedication and an unmatched service. We commit to raise the bar at every business opportunity.

Business owners with advertising and promotional needs may contact us for help with Indoor/Outdoor LED, Channel Letters, Billboards, Mobile Billboards, Pylon, Monument, Content Management and all LED lighting needs, just to name a few.
